---

## 1. Pore size distribution of artificial datasets

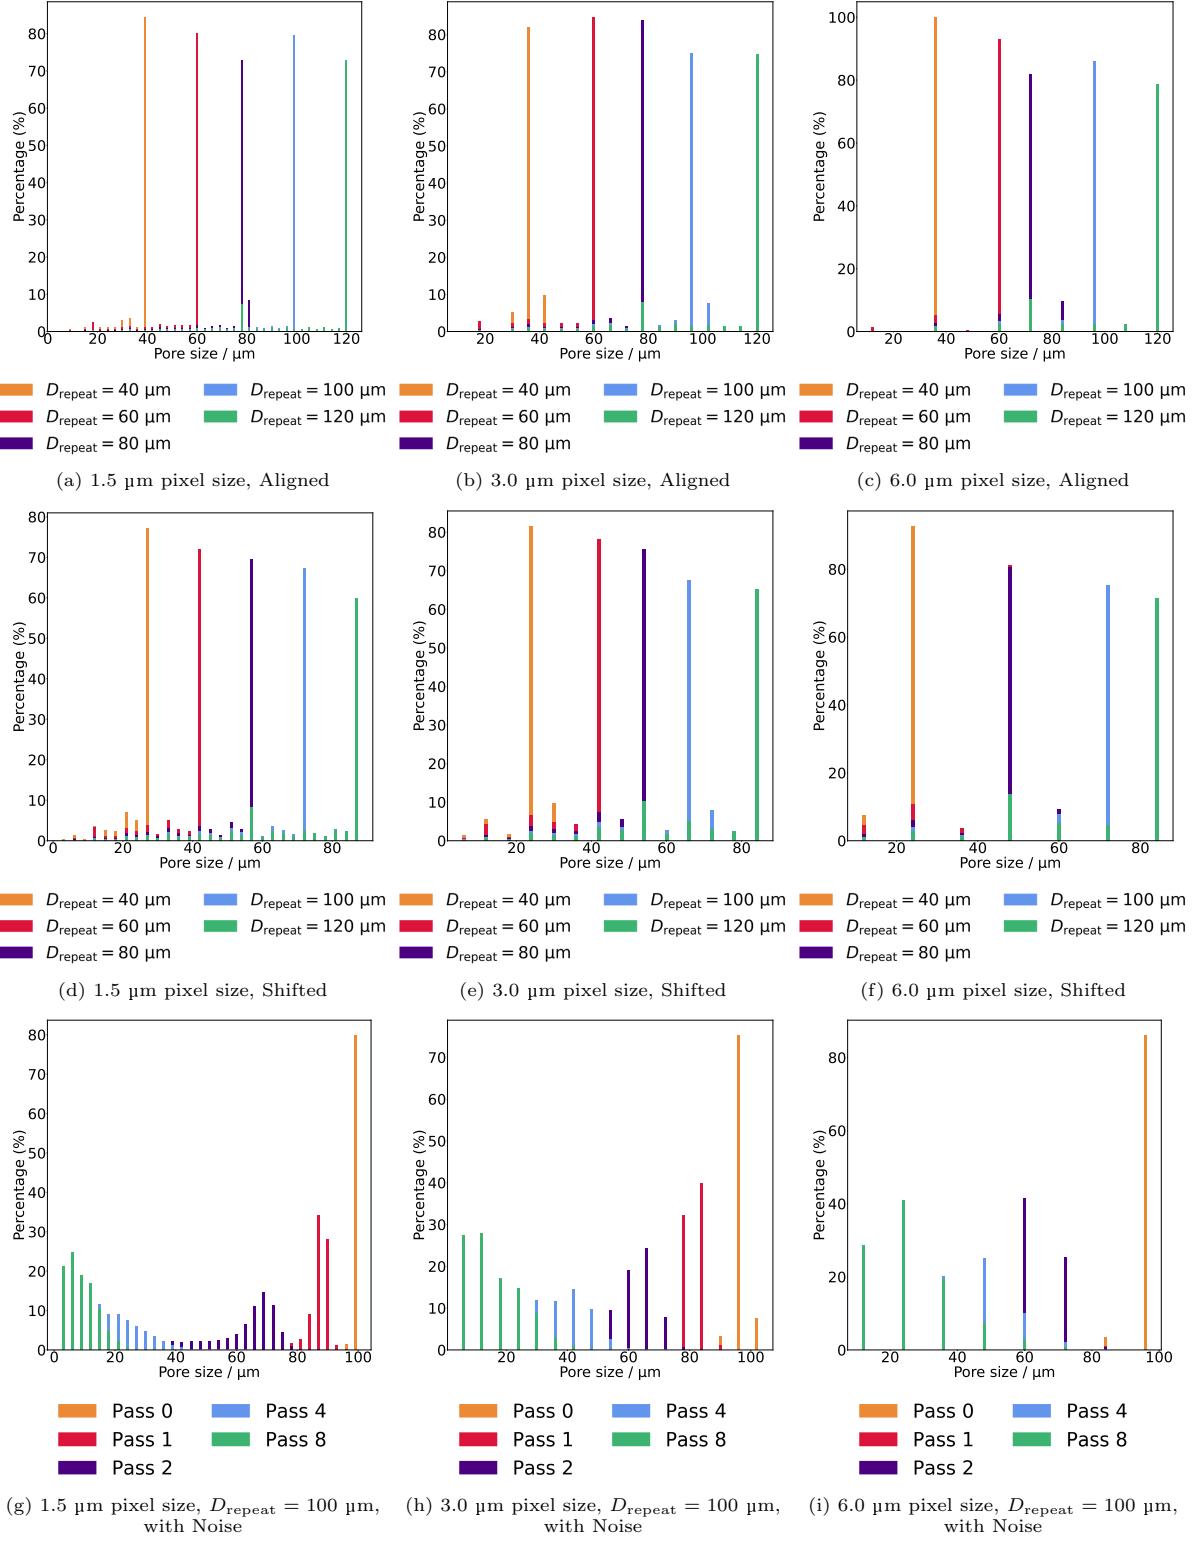

Figure 1: Pore size distribution for aligned, shifted and noisy lattices at different simulated pixel sizes and simulated pore sizes.

## 2. Interconnectivity of artificial datasets

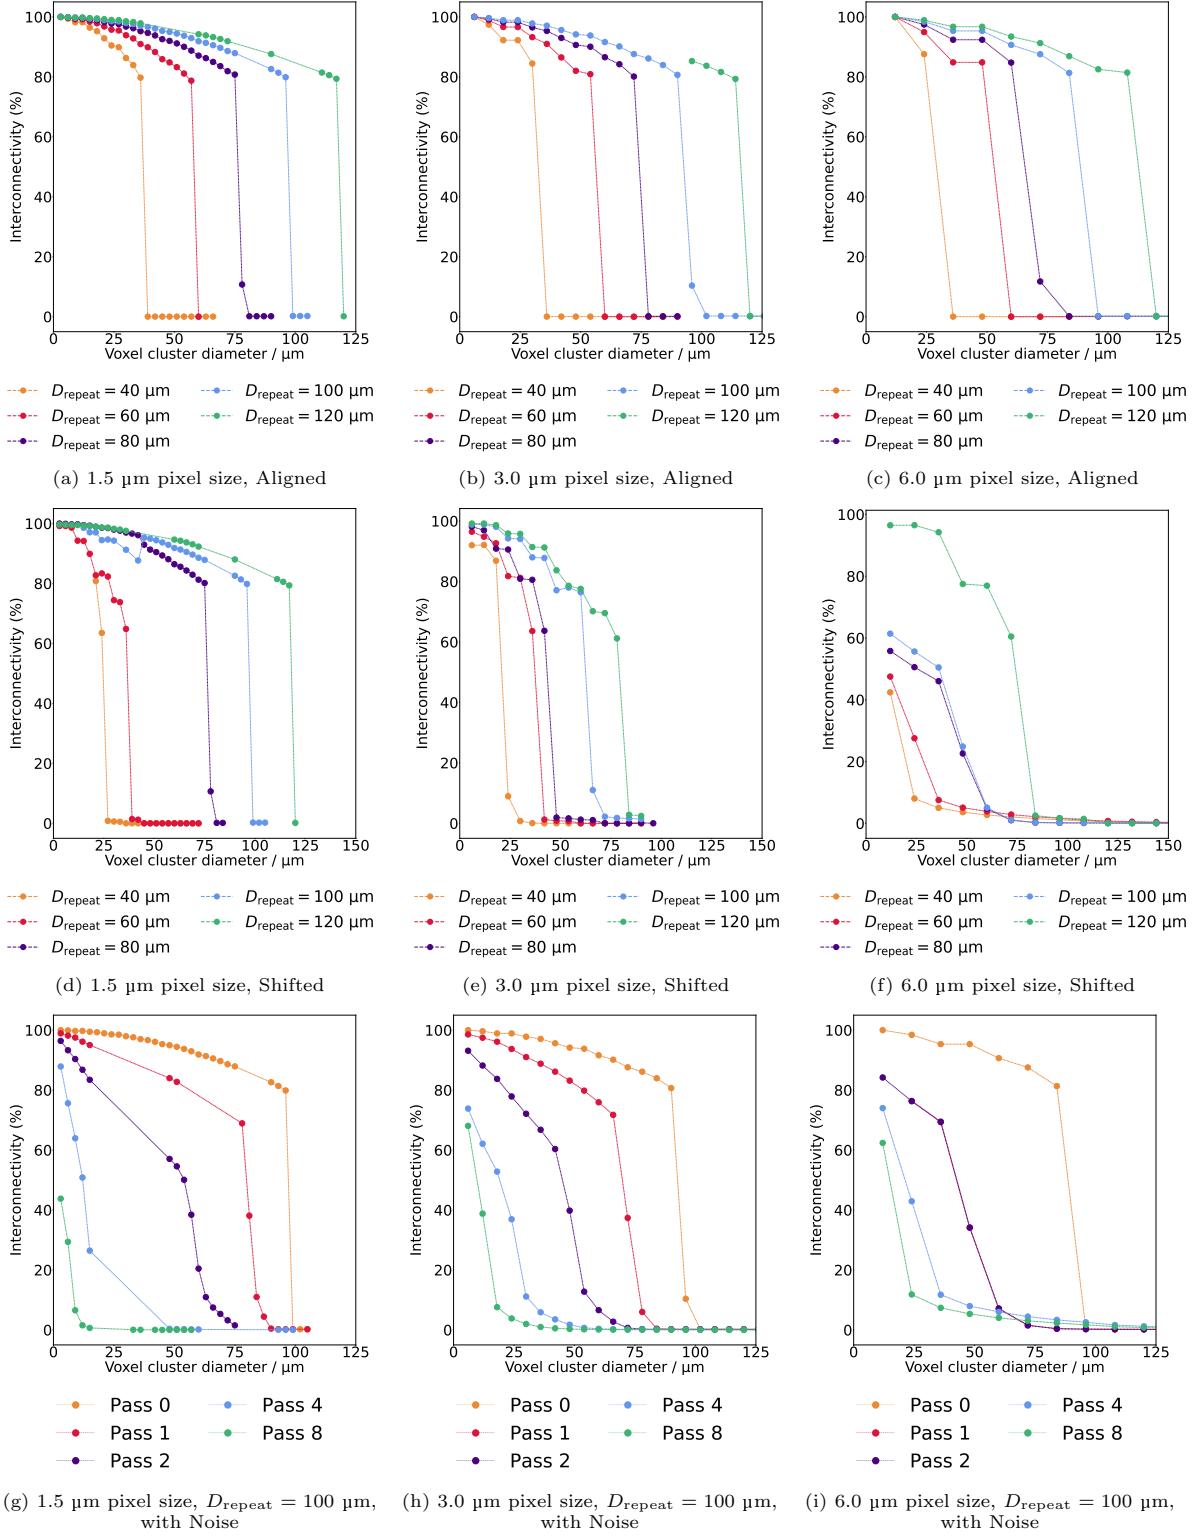

Figure 2: Volume interconnectivity for aligned, shifted and noisy lattices at different simulated pixel sizes and simulated pore sizes.

### 3. Percolation diameters of artificial datasets

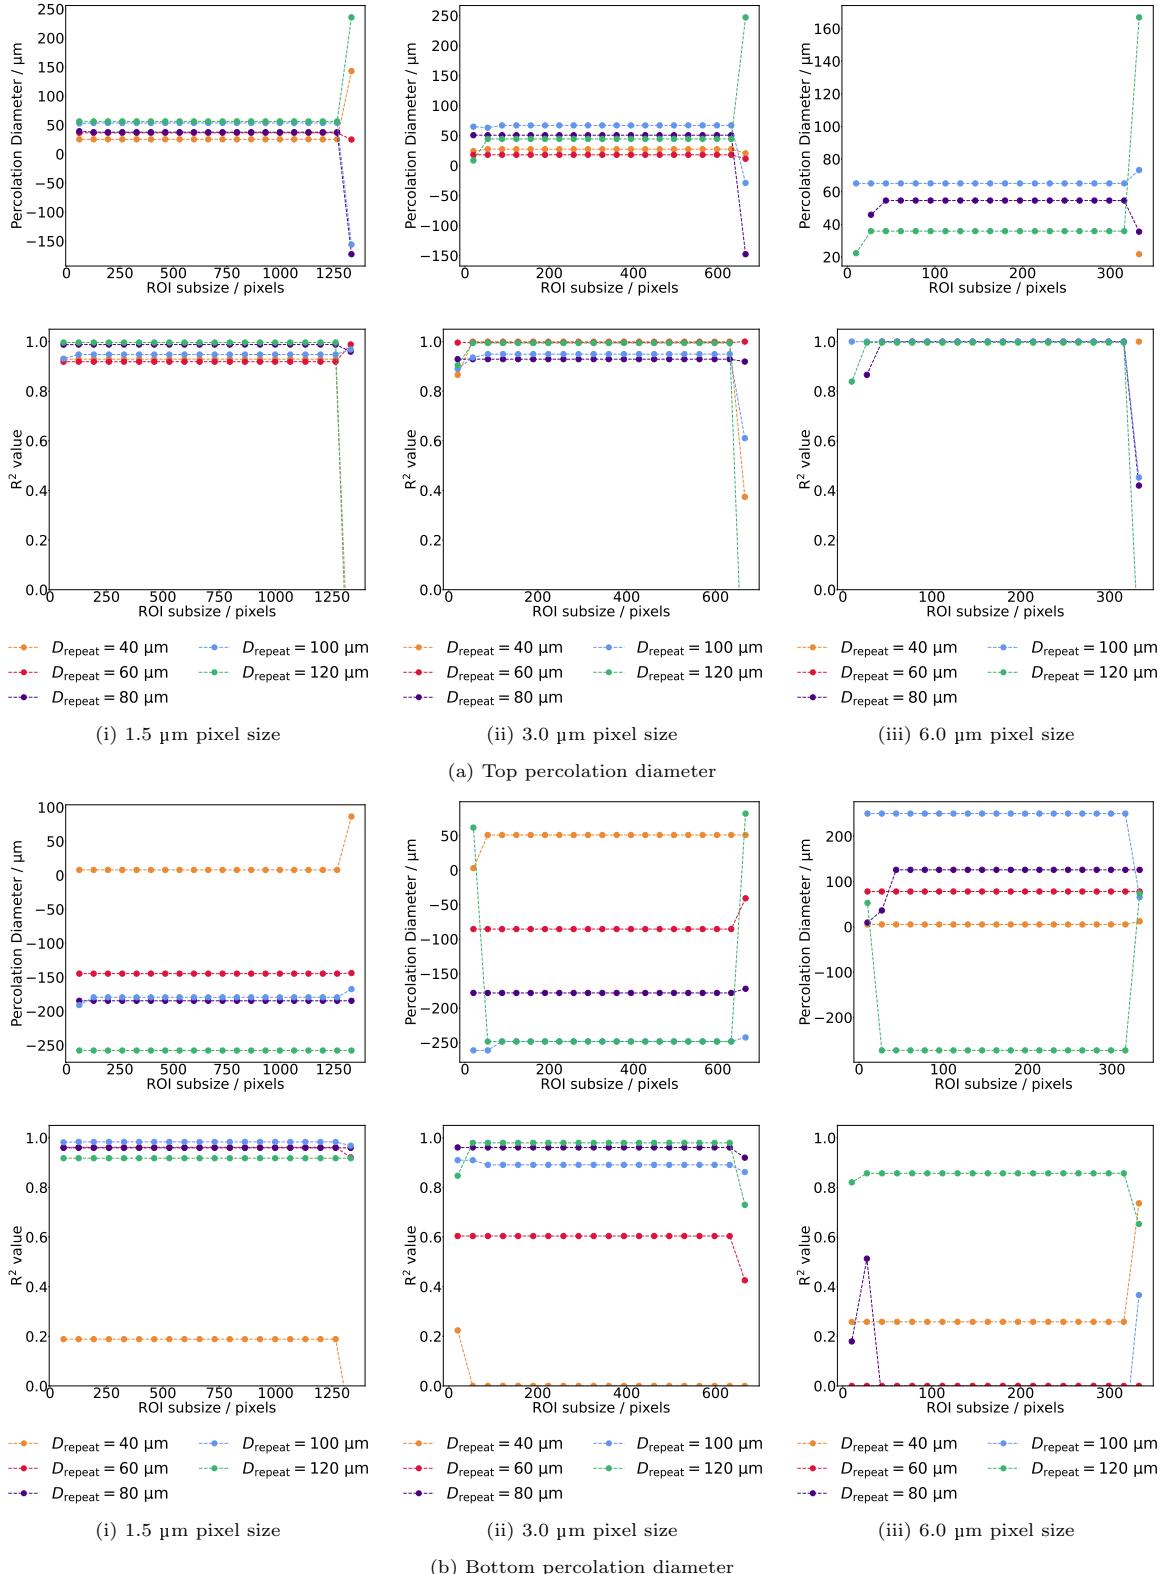

Figure 3: Percolation diameter of shifted datasets determined as a function of ROI subsize using the left subdivision algorithm.

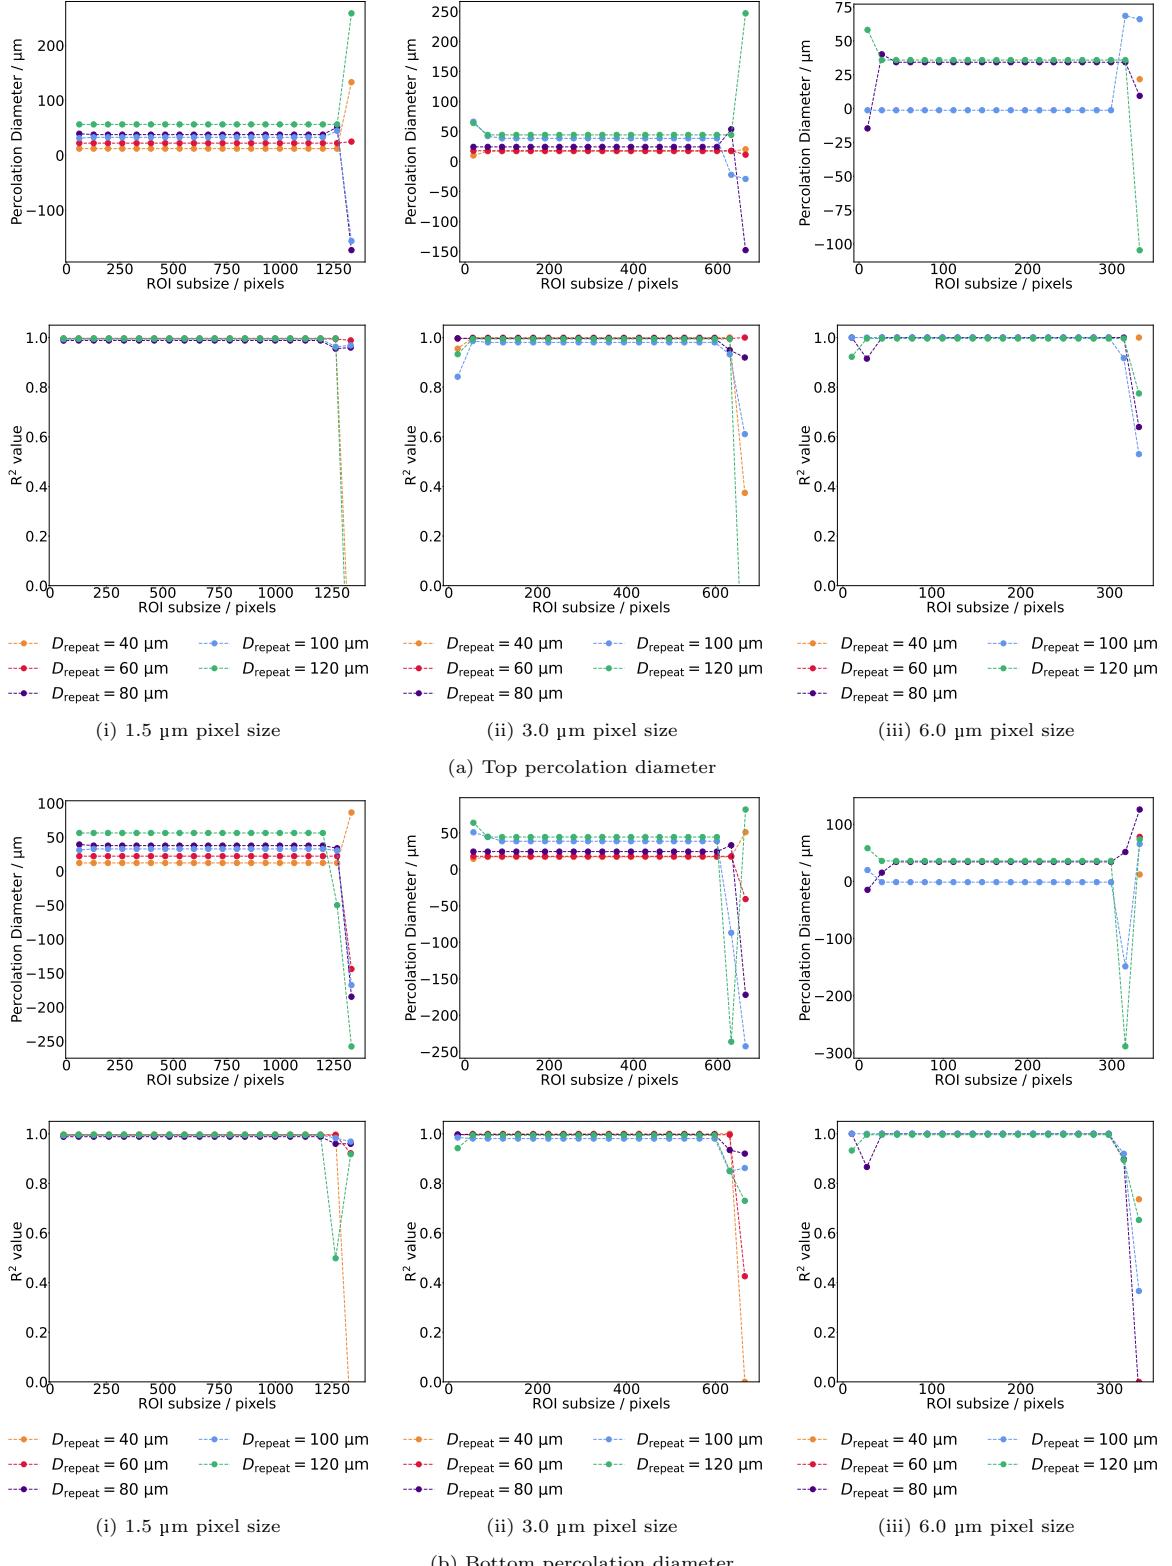

Figure 4: Percolation diameter of shifted datasets determined as a function of ROI subsize using the centre subdivision algorithm.

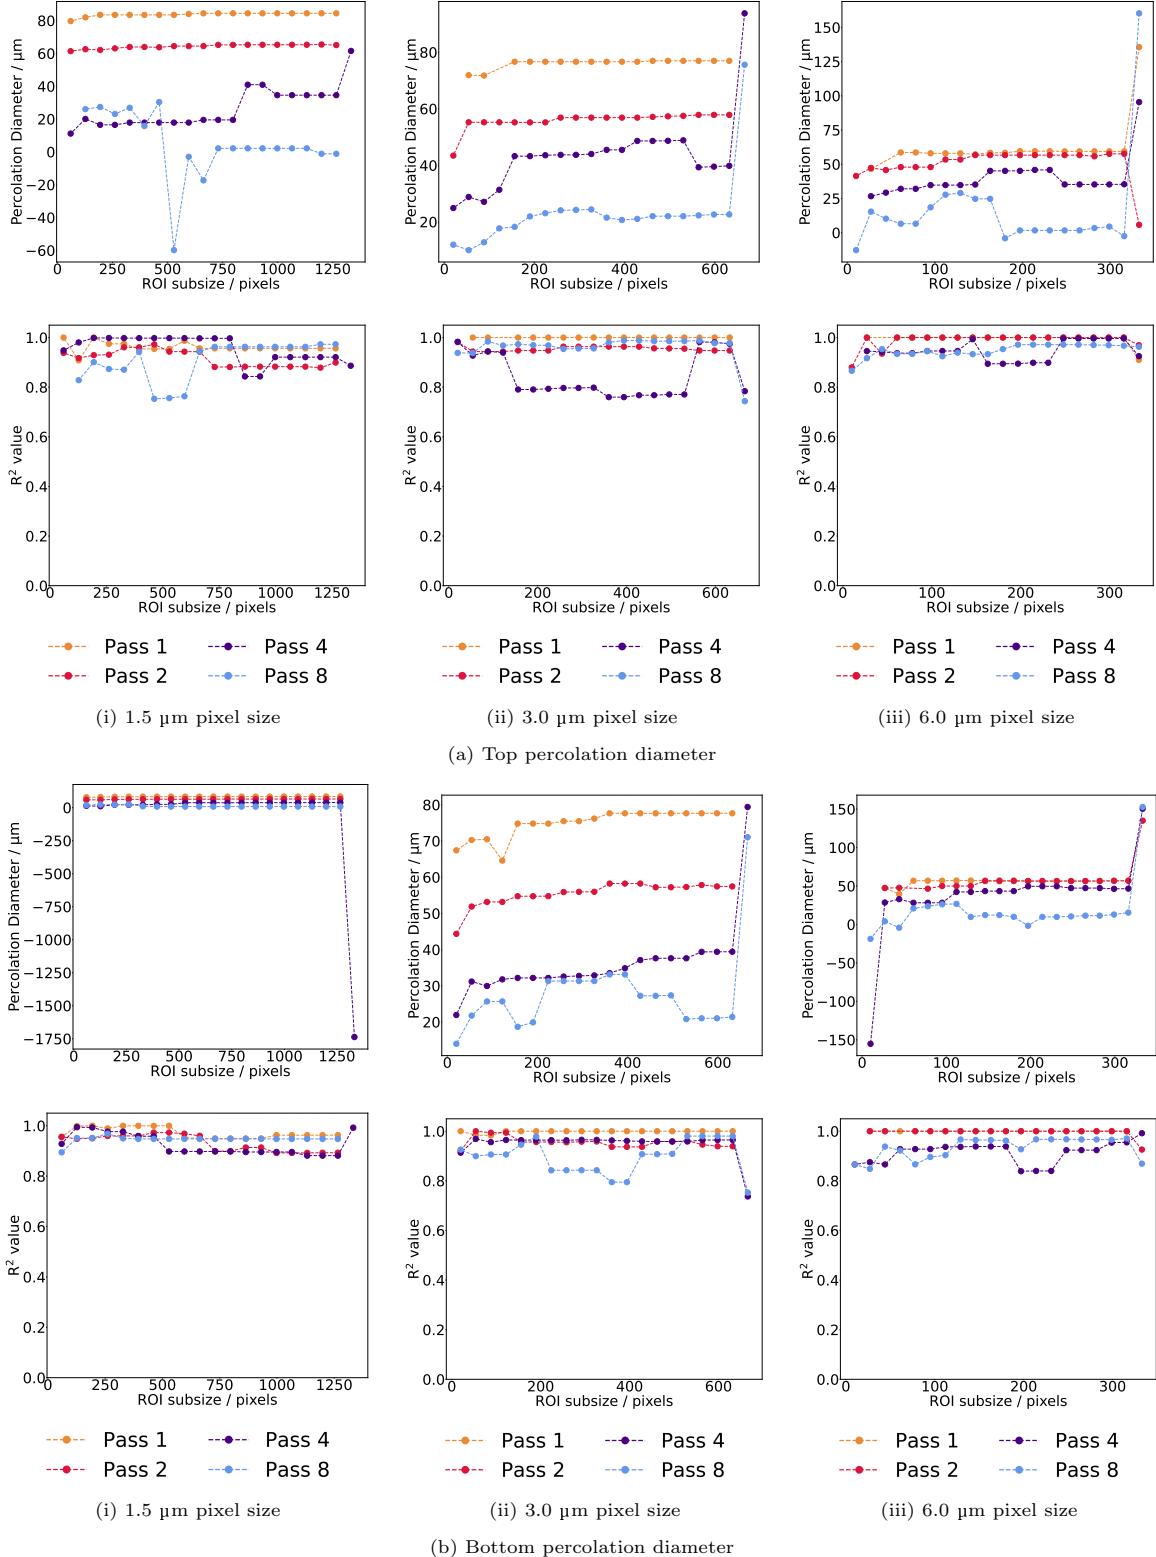

Figure 5: Percolation diameter of datasets with added passes of noise determined as a function of ROI subsize using the left subdivision algorithm.

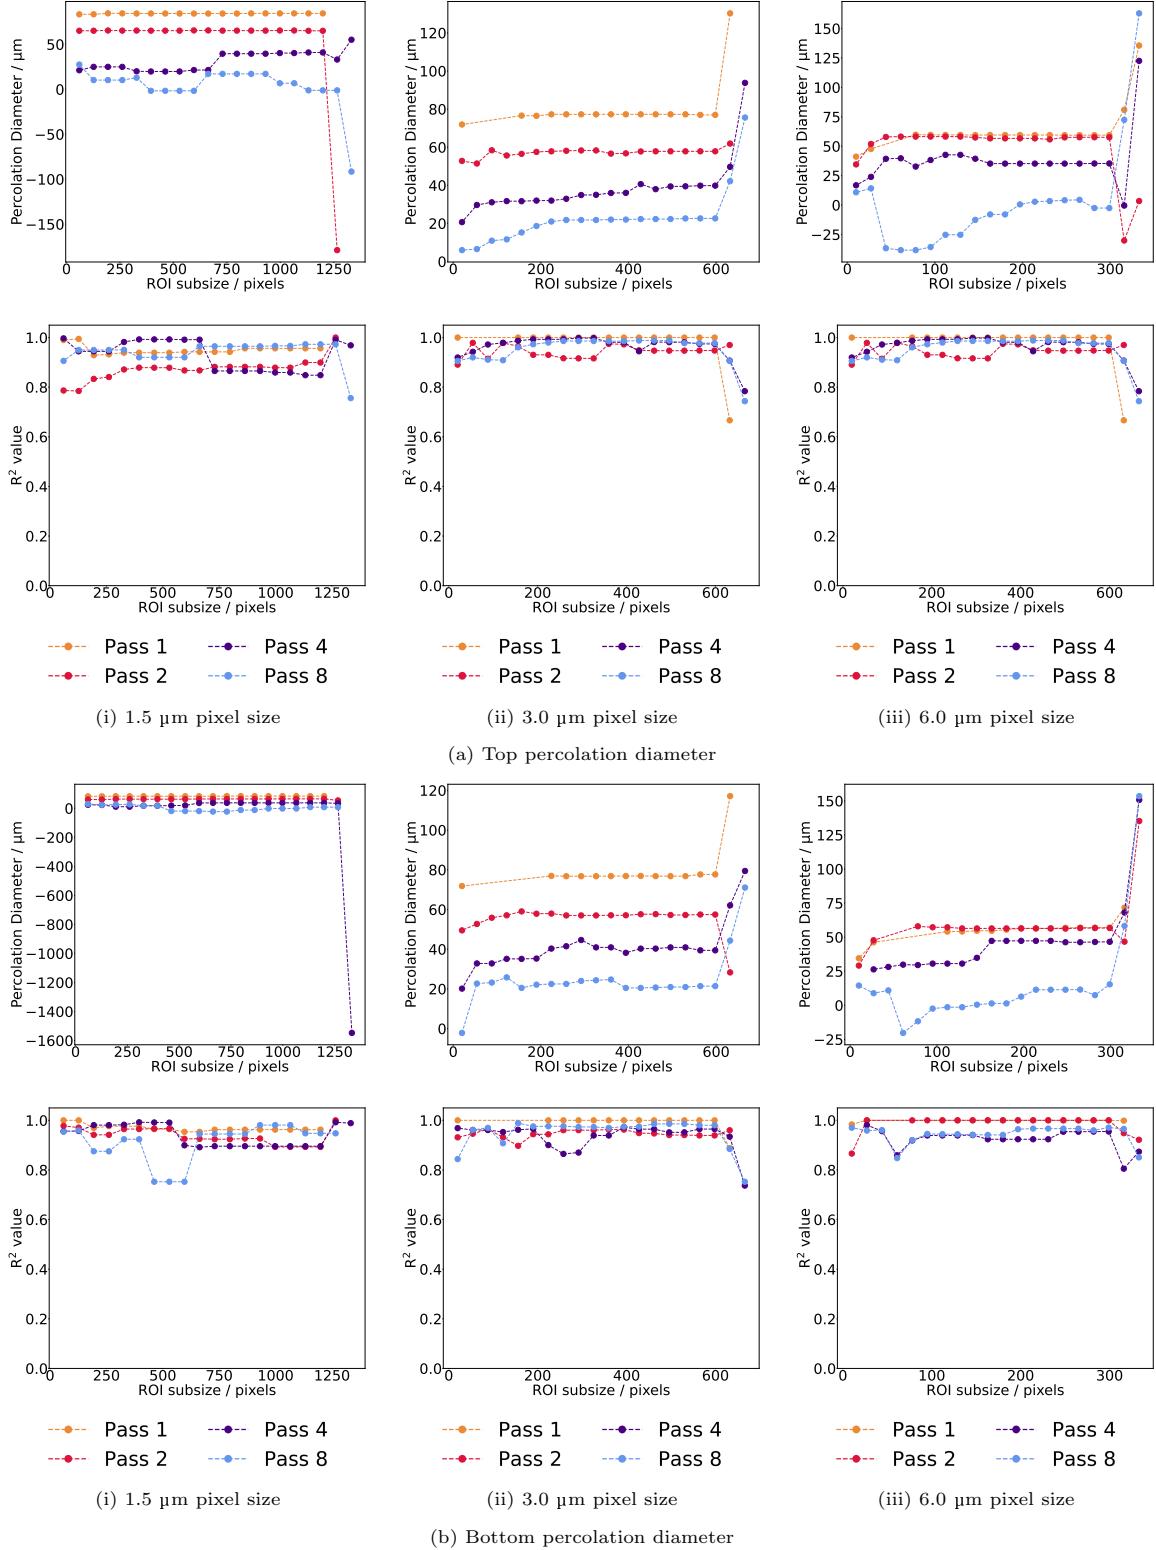

Figure 6: Percolation diameter of datasets with added passes of noise determined as a function of ROI subsize using the centre subdivision algorithm.

#### 4. Pore size distribution of real datasets

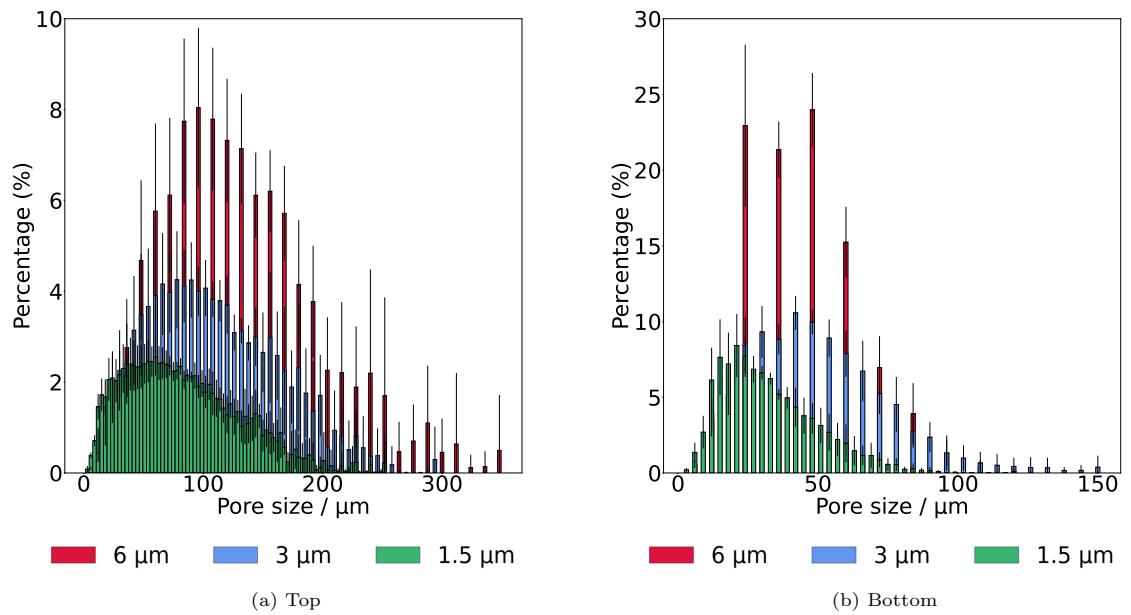

Figure 7: Pore size distributions
