Social status and ejaculate composition in the house mouse

Helen L. Bayram, Catarina Franco, Philip Brownridge, Amy J. Claydon, Natalie Koch, Jane L. Hurst, Robert J. Beynon, Paula Stockley

Supplementary information

Figure S1. Scent marks and social status

Typical scent marking patterns from (a) dominant and (b) subordinate male house mice.

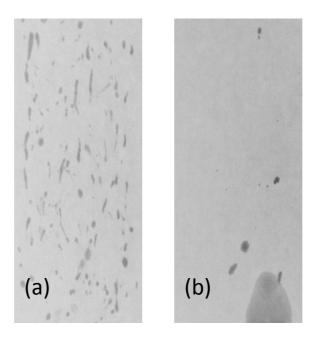

Table S1. Comparison of male reproductive traits according to social status. Differences between dominant and subordinate males are tested with paired t-tests. Comparisons of control and dominant or subordinate males are reported using mixed models with litter included as a random factor (see methods). Additional analyses test for differences in residual testes, epididymides and seminal vesicles masses, to compare results with control for variation in body mass.

| Reproductive trait | Dominant | | Subordinate | | Control | | Dominant v. Subordinate | | | Control v. Dominant | | | Control v. Subordinate | | |
|--|----------|------|-------------|------|---------|------|-------------------------|-------|-------|---------------------|--------------|-------|------------------------|-------|-------|
| | Mean | s.e. | Mean | s.e. | Mean | s.e. | df | t | P | df | t | P | df | t | P |
| Body mass (g) | 21.81 | 0.98 | 21.24 | 1.09 | 20.74 | 0.77 | 7 | 0.54 | 0.603 | 15 | -0.8 | 0.454 | 15 | 0.05 | 0.960 |
