Moore *et al.*, 2021

Rapid multi-generational acclimation of coralline algal reproductive structures to ocean acidification

Table S1. Experimental tank carbonate chemistry calculated from pH and A_T measurements.

Standard error of pH measurements = 0.01 units. $n = 780$ per treatment. Mean measured day time A_T ($n = 72\text{--}85$ per treatment, with s.e. in parentheses), and calculated mean ranges between day and night dissolved inorganic carbon (DIC), $p\text{CO}_2$, and calcite saturation states of seawater (Ω_C), given salinity 36.2 and temperature 26.0 ° C. PC = present-day constant, PF = present-day fluctuating, OC = ocean acidification constant, OF = ocean acidification fluctuating.

Treatment	Experimental Tank pH				A_T (μmol kg^{-1})	DIC (μmol kg^{-1})	$p\text{CO}_2$ (μatm)	Ω_C
	Dusk	Day	Night	Mean				
PC	8.04	8.14	8.00	8.05	2347 (8)	1956– 2049	303– 415	5.03– 6.40
PF	7.98	8.23	7.65	7.96	2342 (7)	1889– 2214	230– 1130	2.61– 7.37
OA	7.71	7.85	7.65	7.73	2362 (4)	2145– 2242	691– 1140	2.63– 3.83
OAF	7.68	8.11	7.22	7.67	2362 (2)	1992– 2392	333– 3385	1.03– 6.13

Table S2. Sample size, mean conceptacle abundance and standard error for different generation and treatment combinations.

Generation	Treatment	N	Mean Conceptacle Abundance	SE
